OUTLINE

Software Description

The software designed will present an interactive program where users and team members can access the ticketing system for the movie theatre. It will contain various requirements as specified in the requirements specification. The program will allow customers to book tickets to movies and will allow team members to access the database.

Software Architecture Overview-

- Architectural diagram of components
- UML Class Diagram
- Descriptions of class, attributes, and operations

Development Plan-

- Timeline
- Team member responsibilities
